

I will stand up straight in the Xray machine.

I will rest my chin on a plastic tray
or bite a plastic block between my teeth.

I will see my face in the mirror.

The dentist may tilt my head slightly
so it is in the right position for the Xray.

I will stand very still.

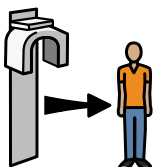

The dentist will press a button
The Xray camera will move around my head.

The camera will beep while it is taking the picture.

When the Xray is finished the noise will stop.

I will move away from the Xray camera
when the dentist tells me.

I will wait in the waiting room.
